Kitchen deep cleaned

## HERE TO DO THE JOBS YOU HATE

### USING STEAM TO KILL GERMS, BED BUGS, BACTERIA & MICROORGANISMS SUCH AS MOLD & DUST MITES

Perhaps the best advantage of all, is that hot steam is a natural sanitising and deodorising agent without any chemical odour. When the steam penetrates surfaces, it destroys mold spores, germs, viruses, dust mites, bed bugs and bacteria. It is a wonderful sanitiser for environments where there have been adults or children with infections of any kind and now you want to restore the place to be infection free. This process will be more effective than most disinfecting chemicals.
